Long eligible size
A Wave-pinning
B Goryachev
C deBelly
D Holmes 3
E Spring
Sizes 5 / 19 / 39
τ = 0.177828 native time
Sizes 3 / 19 / 39
τ = 0.00562341 native time
Sizes 18 / 27 / 39
τ = 5 native time
Sizes 10 / 28 / 50
τ = 0.177828 native time
Sizes 0.6 / 1.6 / 2.6
τ = 0.0177828 native time
Induced core deficit restored, F
Time / own selected window
F Complete short history
G Complete short history
H Complete short history
I Complete short history
J Complete short history
Induced core deficit remaining, D(t) / D(0)
Time after kick (native)
0.5% basal excess × smooth incumbent taper removed; explicit inactive pools receive it where present.
deBelly changes Rac only, retaining all mechanical/controller state. A–E use different declared native windows; clocks are not calibrated across models.
Positive conditional recovery concerns the paired deficit, not generic stability or resistance to a challenger. Native grid retained; Goryachev L39 core has four centers.
