
1 → 2 changes circumference: complementary route 18 → 28, with changed material and incumbent architecture.
2 → 3 relocates the cue on the identical complete C40 Rac/Rho state. Full source histories extend to t = 14000; this display is linear t = 0–4000.
Periodic cut at −10 keeps the original site intact at 0; −10 and C−10 are identical endpoints. All three use h = 0.05, cue peak 1 and support 3.
