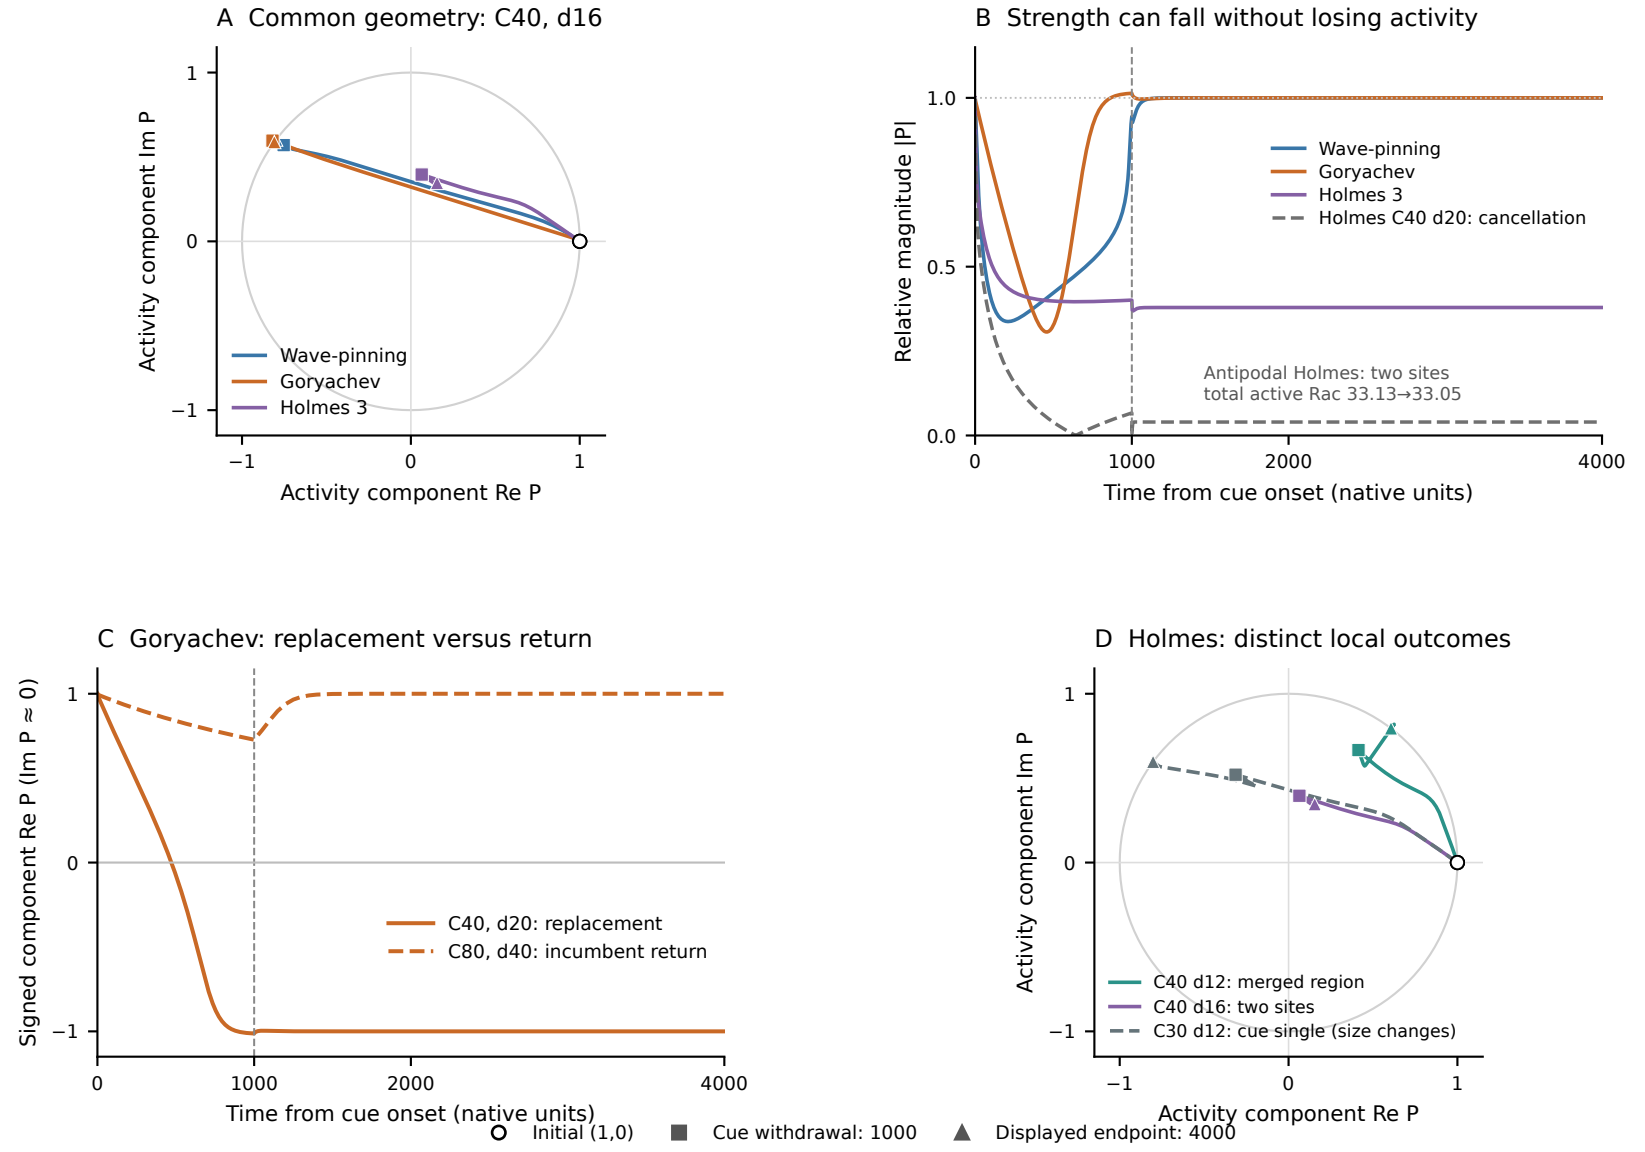
Global activity polarity through site competition

$P(t) = M_1(t)/M_1(0)$: initial vector (1,0); magnitude may exceed 1.

A/D: paths in activity-vector space. All panels show 0–4000 native units; full records reach 14,000.



Width-3 cues: WP peak 0.1; Goryachev 6.4; Holmes 1. Native input/time scales are model-specific.
C40 Holmes d12/d16 share the exact full basal state; other size comparisons change material, architecture and routes.
