Substantial finite ring challenge: local patterns and the activity vector answer different questions

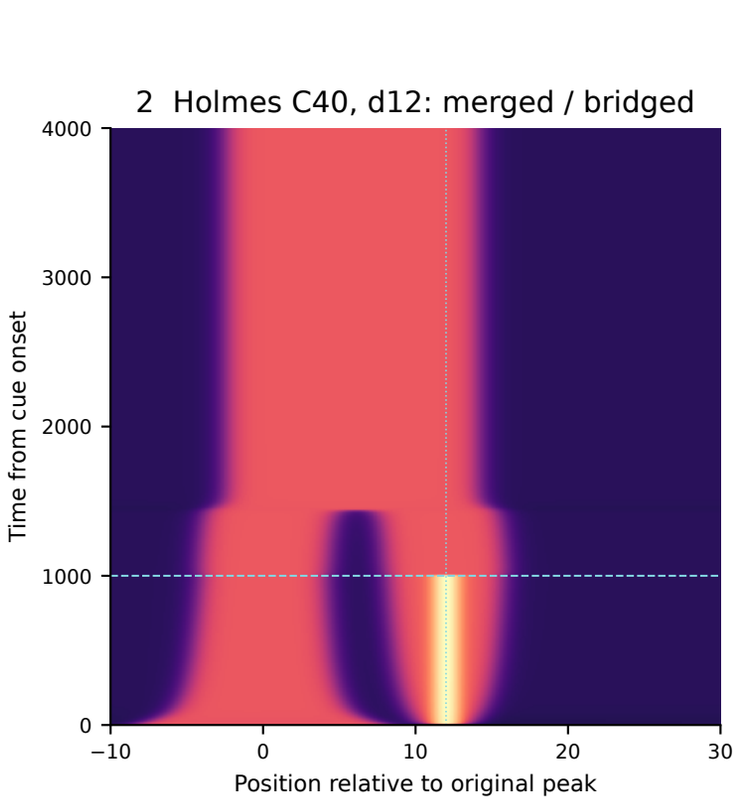

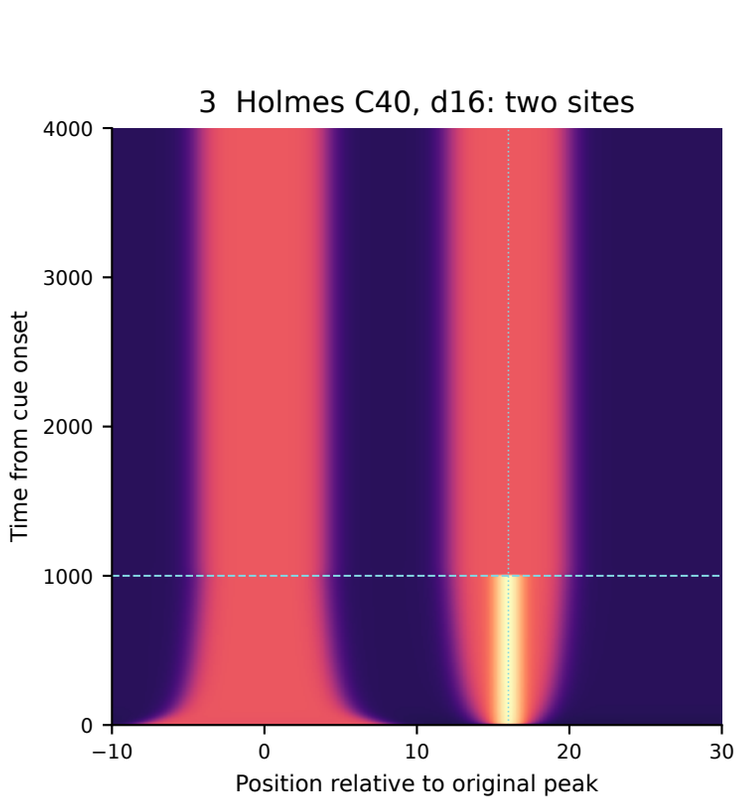

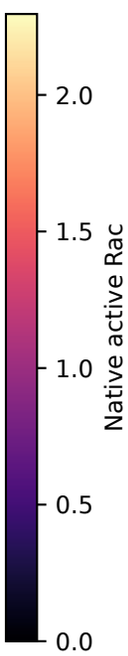

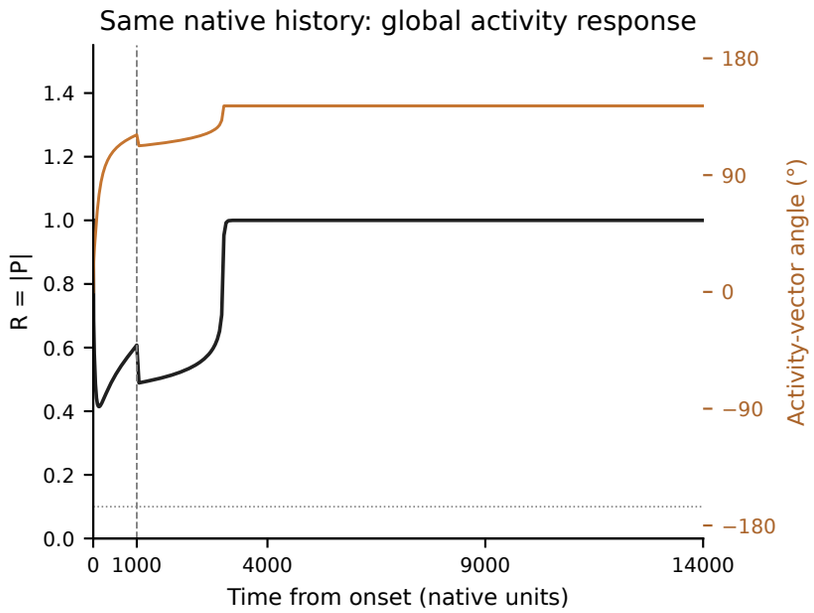

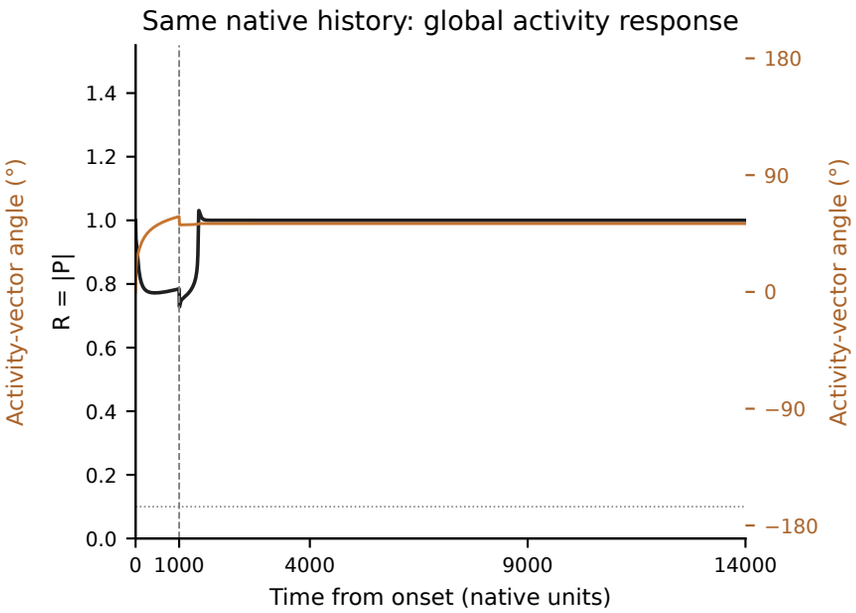

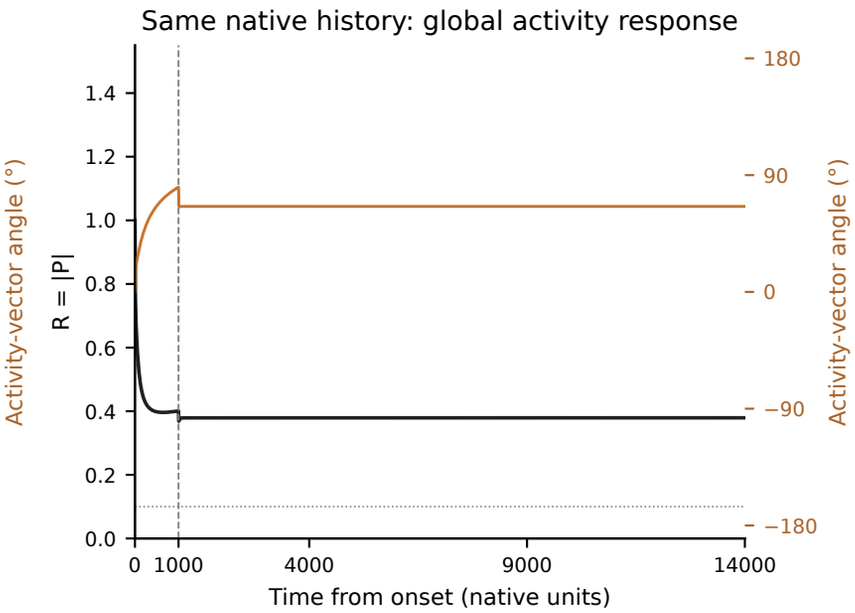

Maps: 1000on /13000off, final t14000. Histories: exact h.05 and linear0–4000; nativeRac shared unclipped0–2.29621. Original site is intact at0 under periodic cut−10.
1→2 changes size/material/architecture/complementary route;2→3 relocates cue in the exact same complete C40 state.5/4 mark the linked Goryachev return/replacement pair.
P=M₁/M₁(0) is an activity descriptor. BlackR and orangeangle retain magnitude and direction; angle is withheld forR<.1. No cell velocity or deterministic persistence is inferred.
