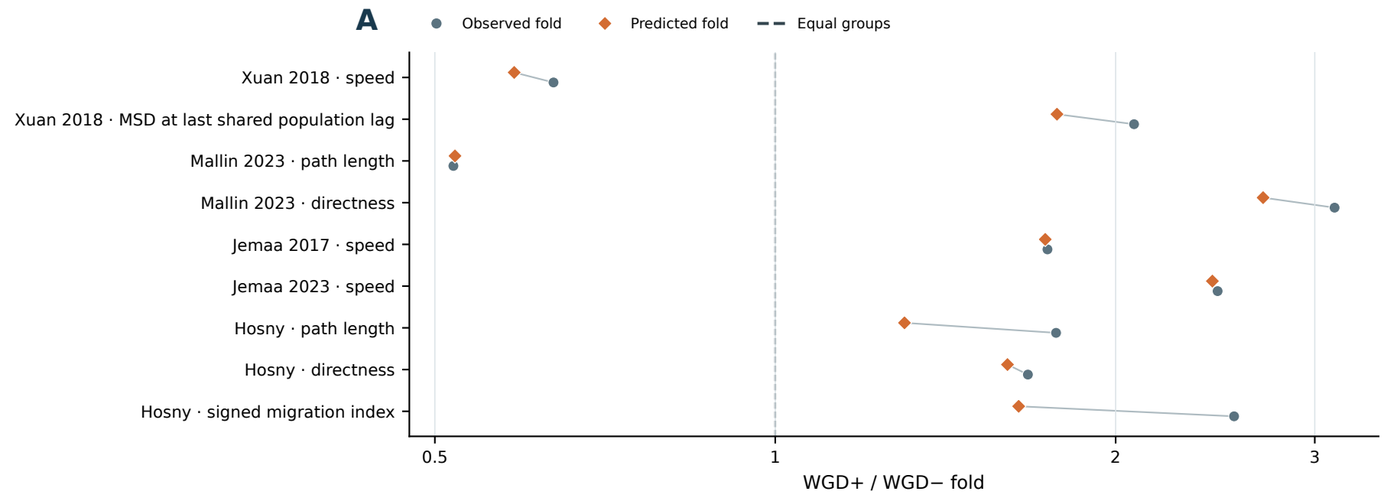

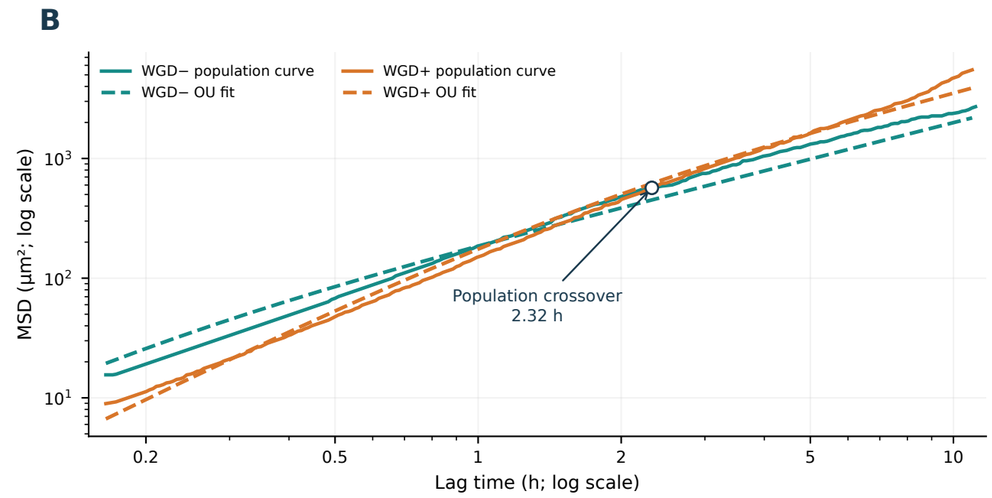

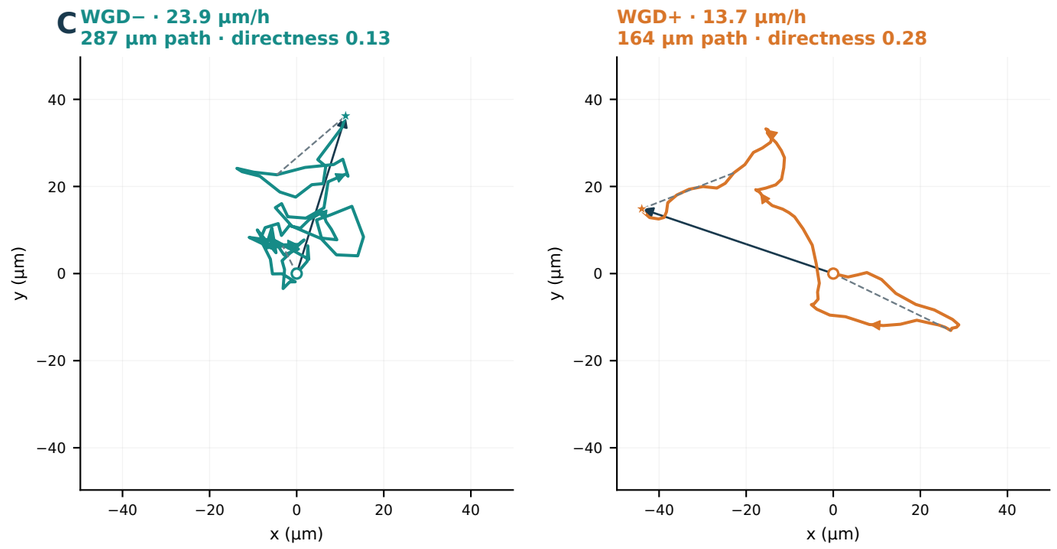

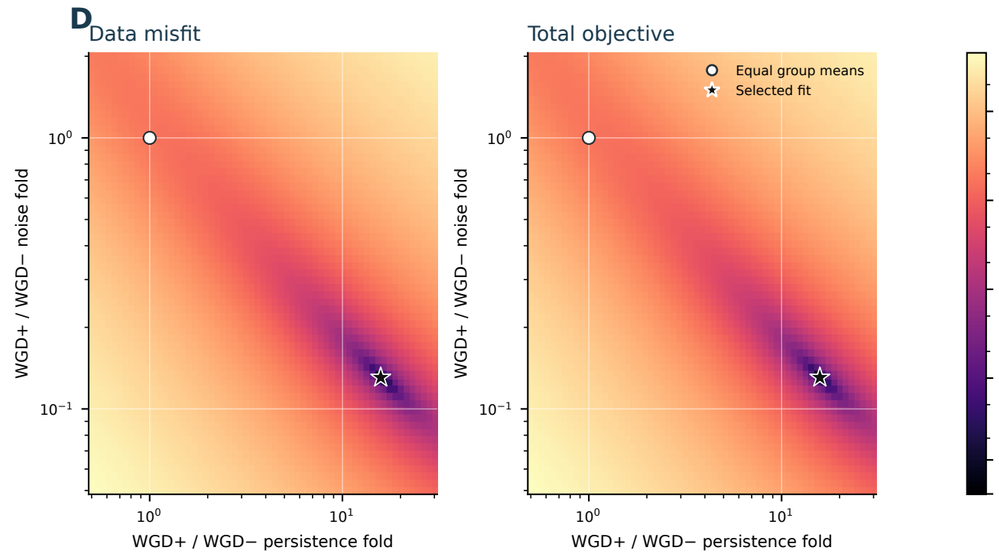

Figure 3 | Migration summaries, simulated tracks and fitted OU dynamics

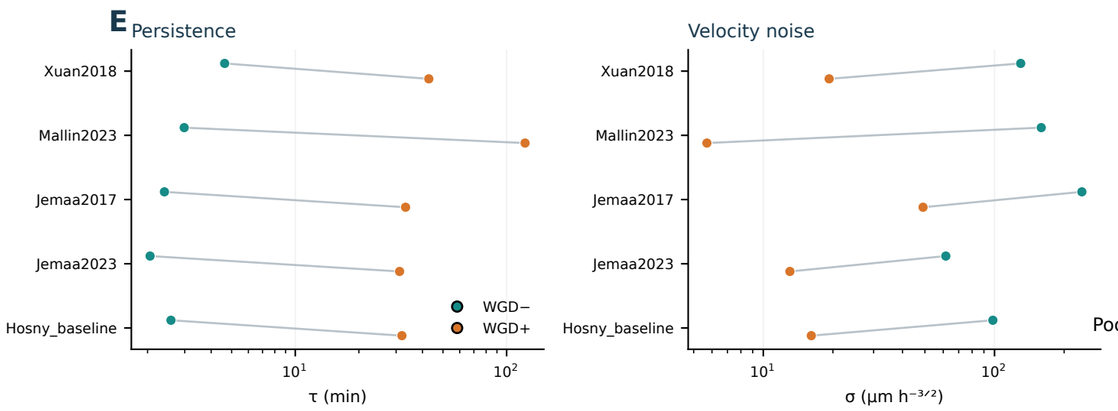

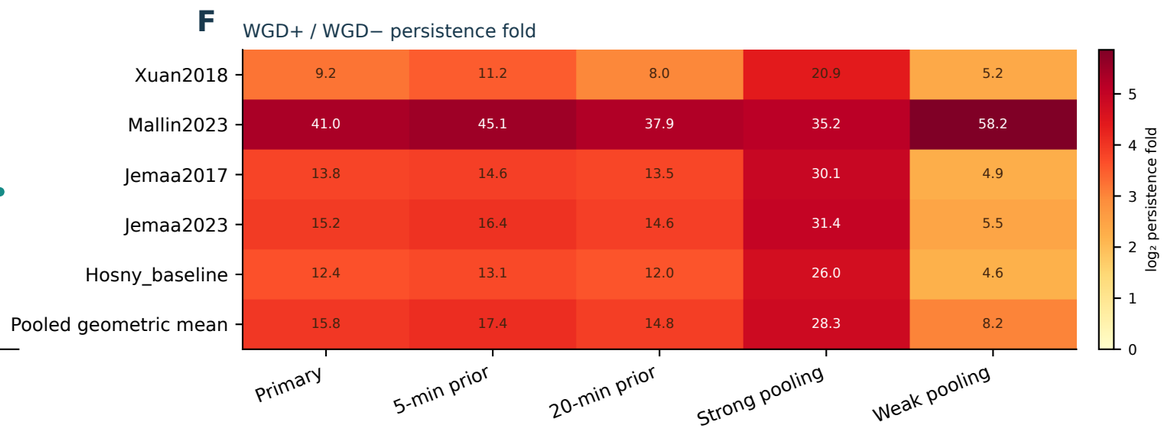

WGD− fixed; WGD+ persistence and noise shifted

A observed vs primary-fit folds · B population MSD + OU curves · C simulated tracks · D WGD−-fixed relative surfaces · E primary parameters · F prior/pooling sensitivity

C speed = path / 12 h; directness = net / path. Dashed 2 h chords contribute squared displacements to track MSD. Full population MSD curves are fitting targets; simulated tracks are illustrations.
