

B: C = 30, 37.8, 47.6; Spring 2.5, 3.15, 3.97.
C–D: chemical C = 20–60; Spring 1–3. These are not matched size grids.

C: $f = 0.001$; $a = 10^{-4}$ × native reference. Insets: finite integrated displacement, normalized to the smallest size (shared 0–1.1 scale).

D

D: above, absolute diffusivity; below, size ratios at the same input. Lines: 1:1. Horizontal bars: whole-seed-bootstrap 95% CI.
