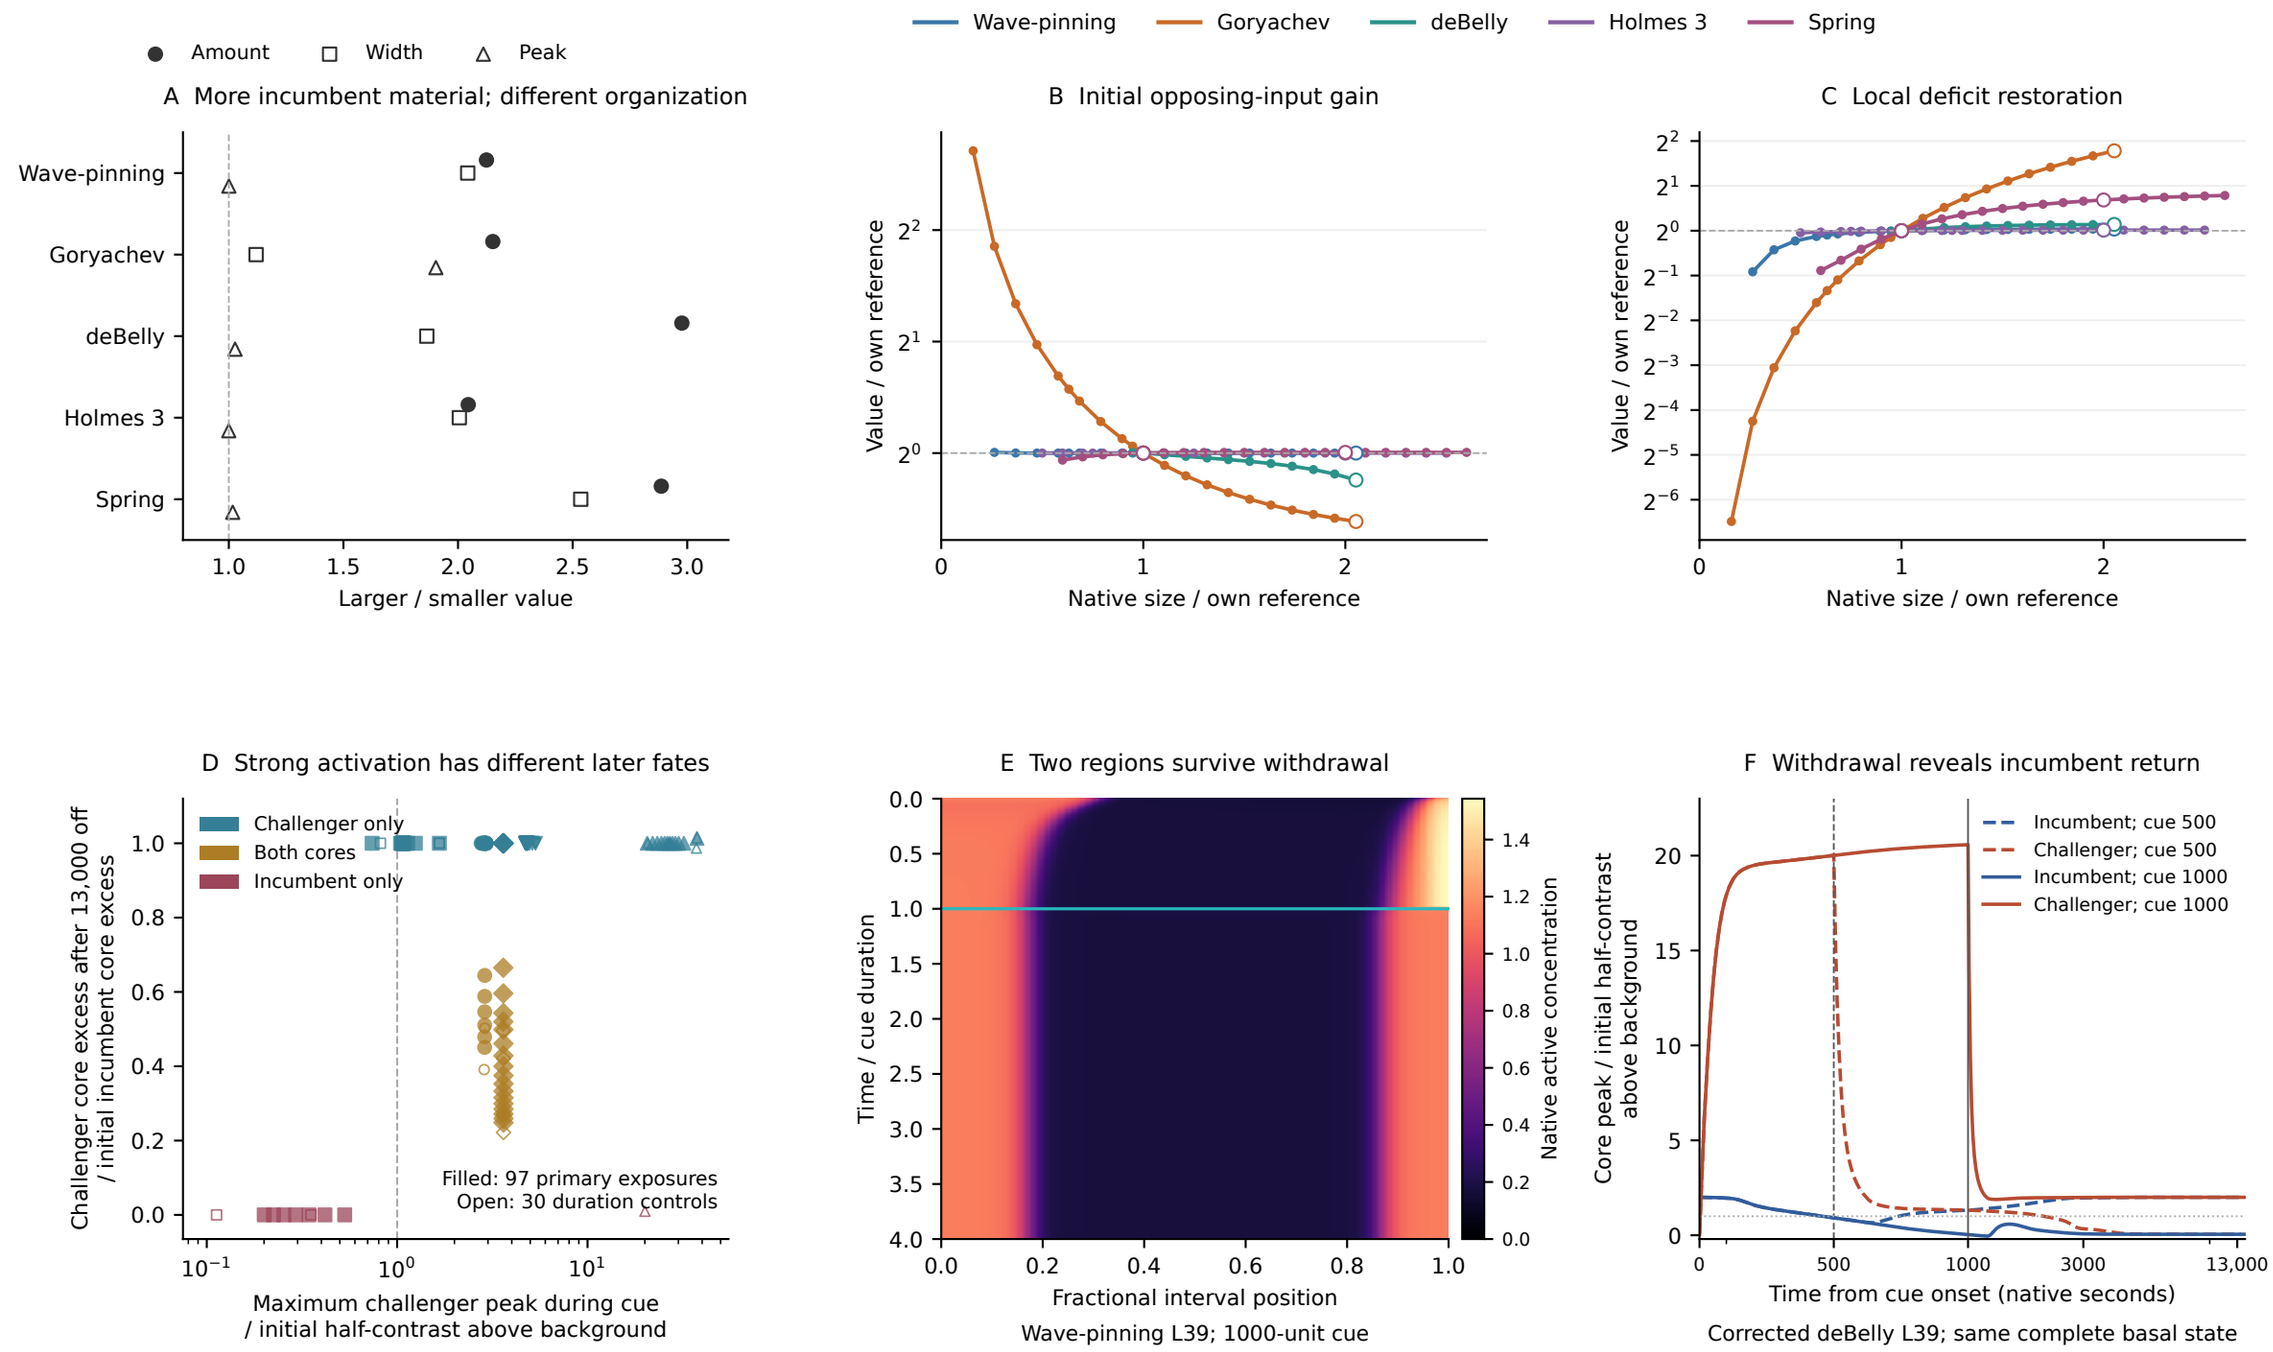
Figure 2 supporting evidence | All-five organization, response and post-withdrawal ambiguity



A: near-doubling pairs L19→39; Holmes 20→40; Spring $L_0$1→2. B–C: all 97 qualified basals; native units and clocks differ.
D: core geography is threshold-defined, not a scalar replacement gate or tracked site identity. E: cyan marks withdrawal.
F: dashed 500-unit cue returns to the incumbent; solid 1000-unit cue retains the challenger. Each has 13,000 cue-free units.
