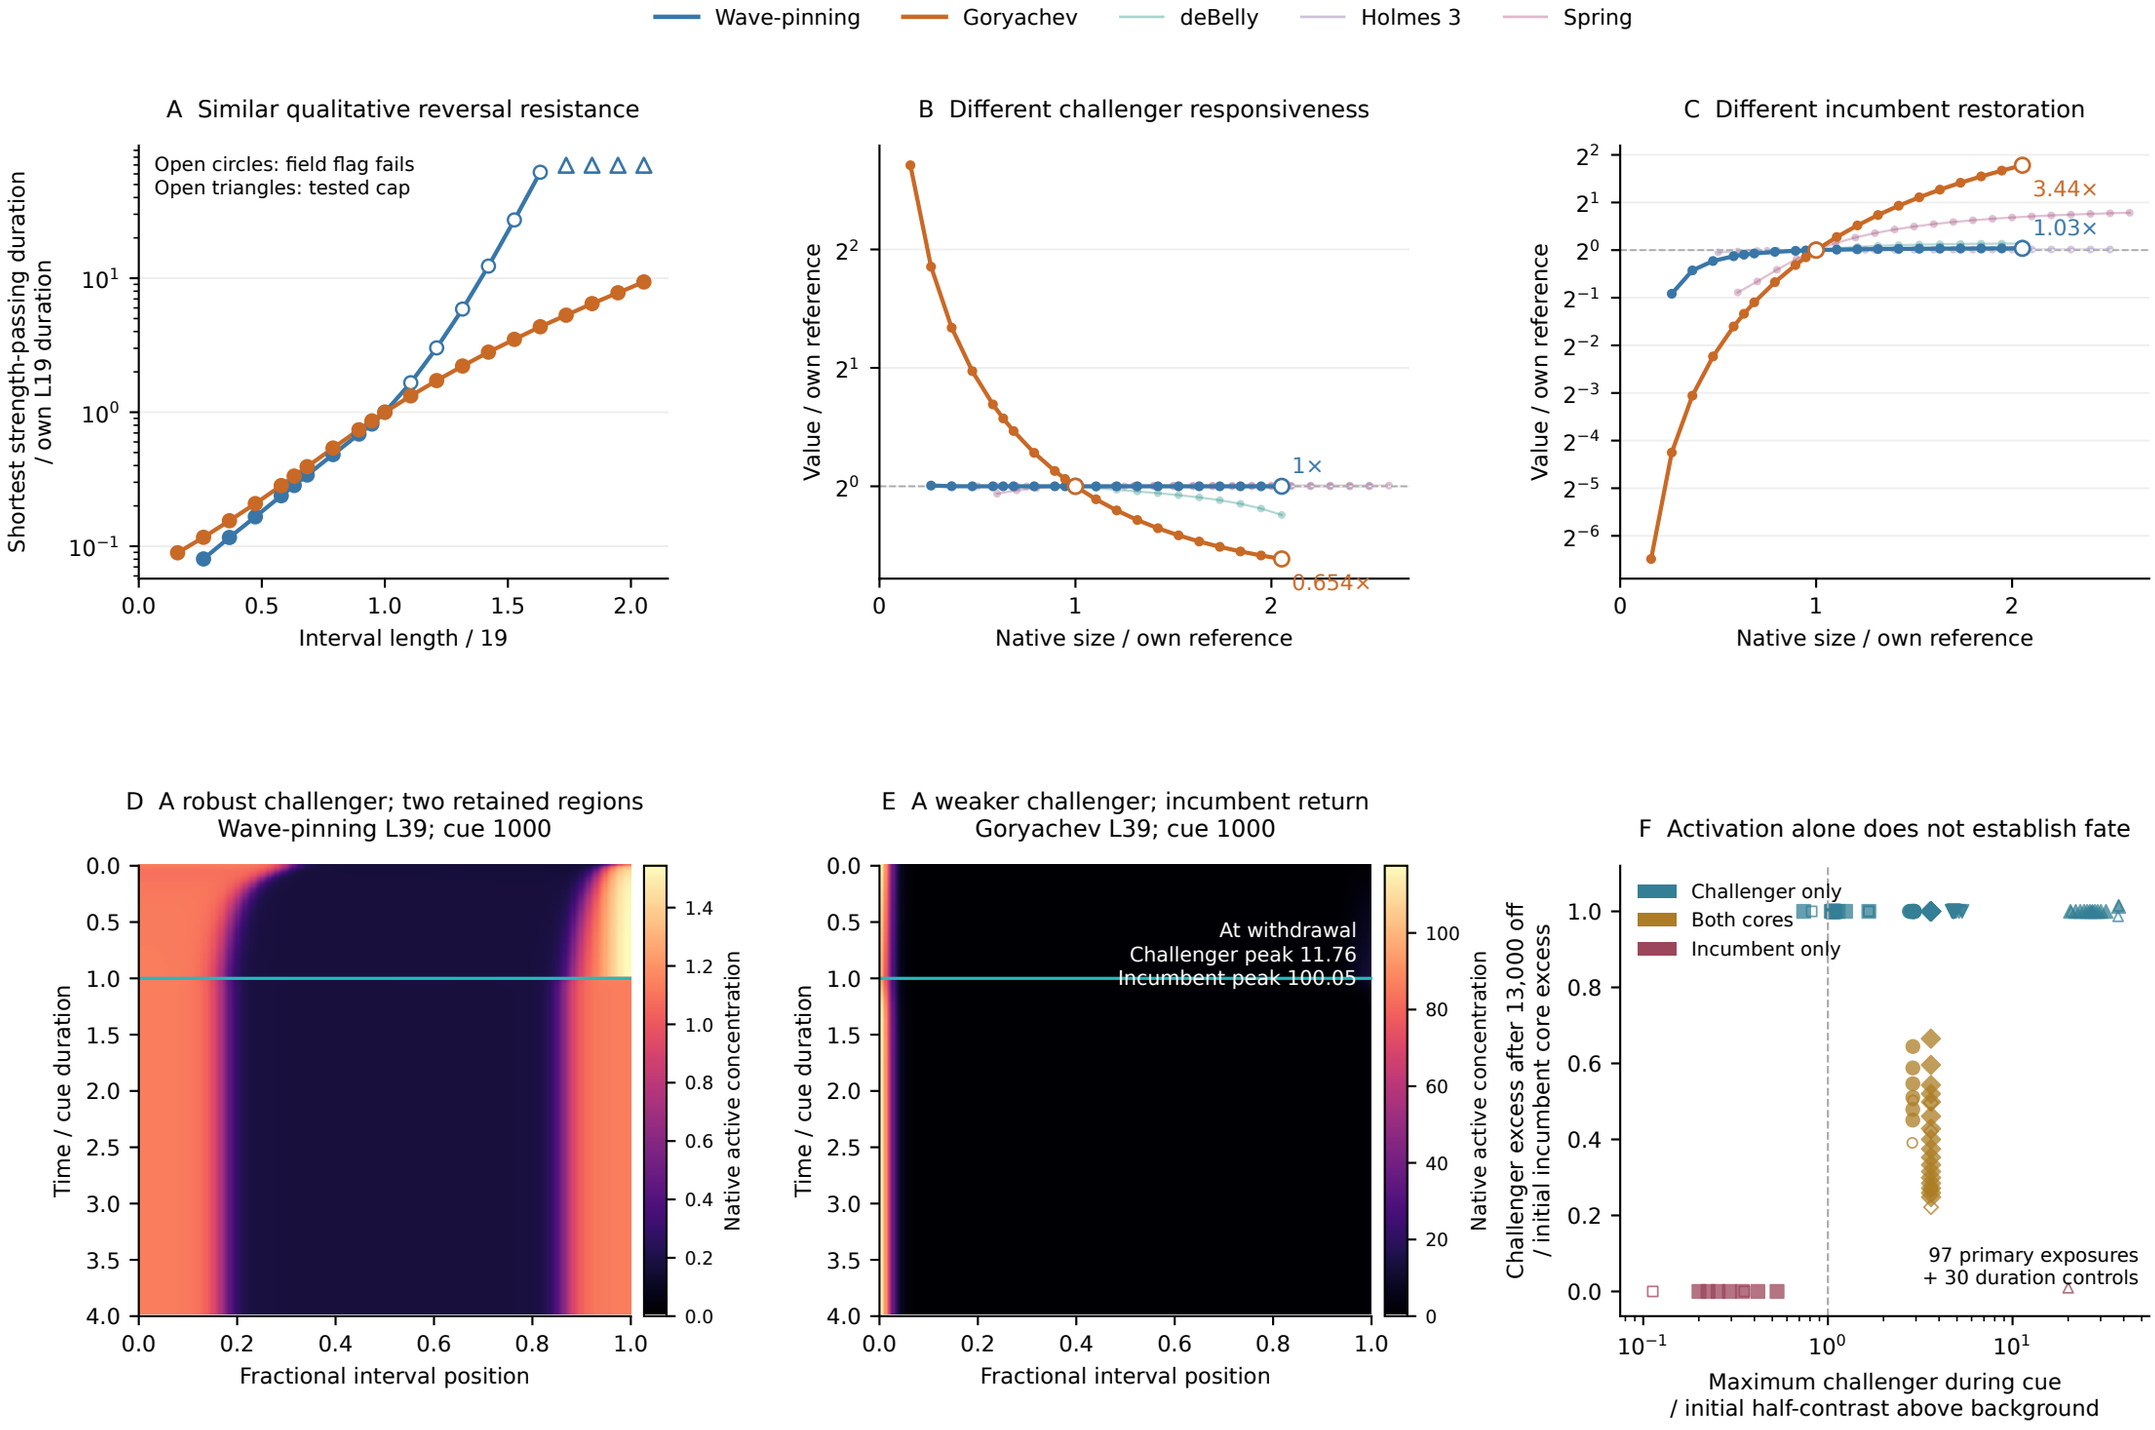

# Figure 2 | Similar reversal trends, distinct challenge responses

A: fixed-support scalar-strength thresholds; similar means increasing over observed successes, not equal slopes or calibrated times.

B–C: all 97 basals; WP/Goryachev highlighted. C is a specified local active-loss response, not general stability.

D–E: exact native fields, model-specific zero-based scales; cyan = withdrawal. F: final fixed-core geography; filled = primary, open = duration control.
