Spring activity amount and spatial first harmonic

$$q_1 = |M_1|/M_0, \qquad R = (M_0/M_0(0))(q_1/q_1(0))$$

Exact per-case/time identity; population mean R is the mean paired product, not the product of separate means.

C₀=1 C₀=2 C₀=3 Noise Mean input No added input

All 81 native cases; scalar cadence 0.5, field checks every 4; shared row scales; pointwise 95% seed intervals for noisy groups only.
