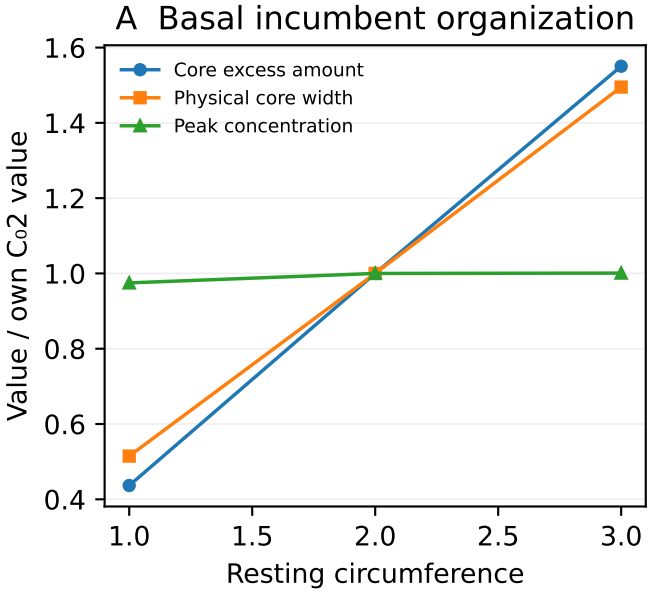
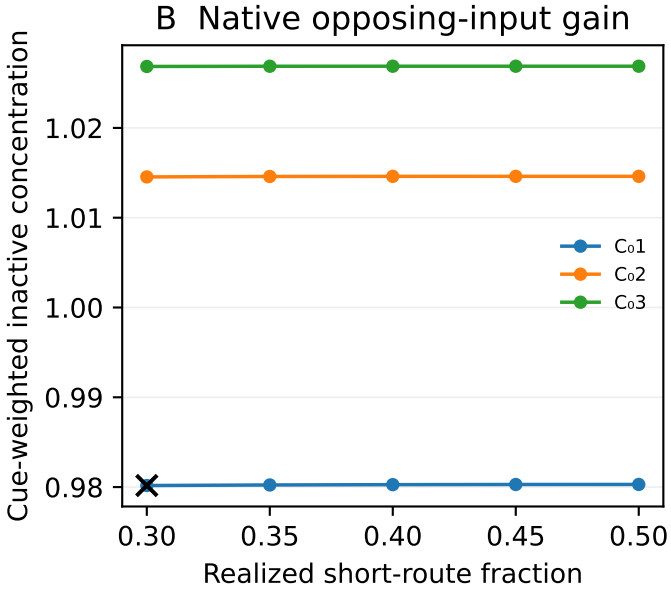
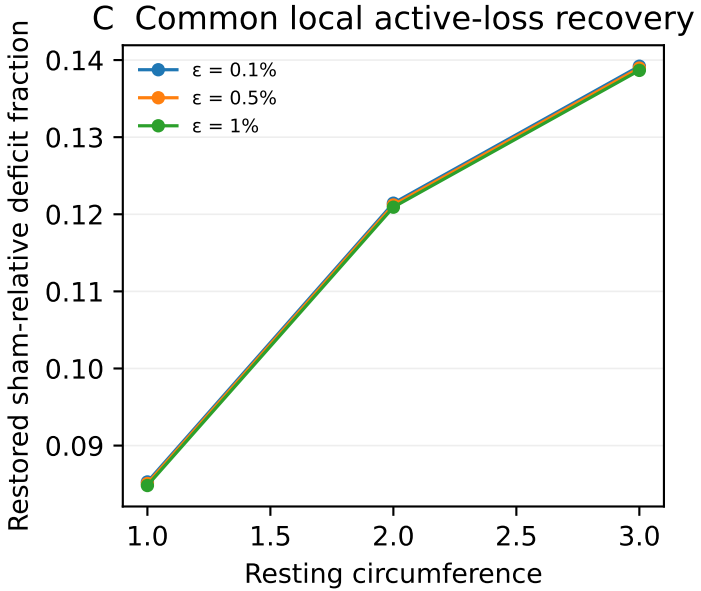
Spring ring | Basal organization, input gain and specified local restoration







Exact shared C₀1/2/3 basals; full evolving mean-force/stretch/dilution/diffusion dynamics. Fixed native clock τ=0.0177827941.
Full physical cue support 0.2; × marks overlap with the original half-contrast core. Native length/time units are uncalibrated.
Restoration includes native reaction, transport and circumference response; it is not generic stability or a physical migration law.
