Enlarged cells hold heading longer under fluctuating input

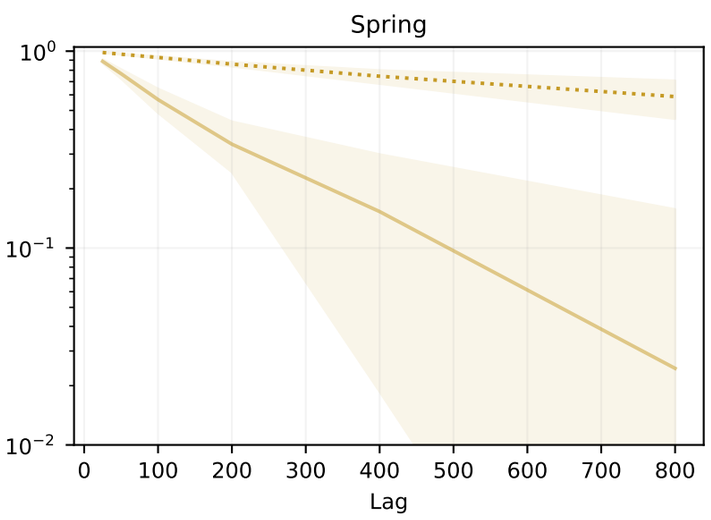

Gains reach or exceed geometry at each model's weakest measurable input; the advantage declines as input strengthens

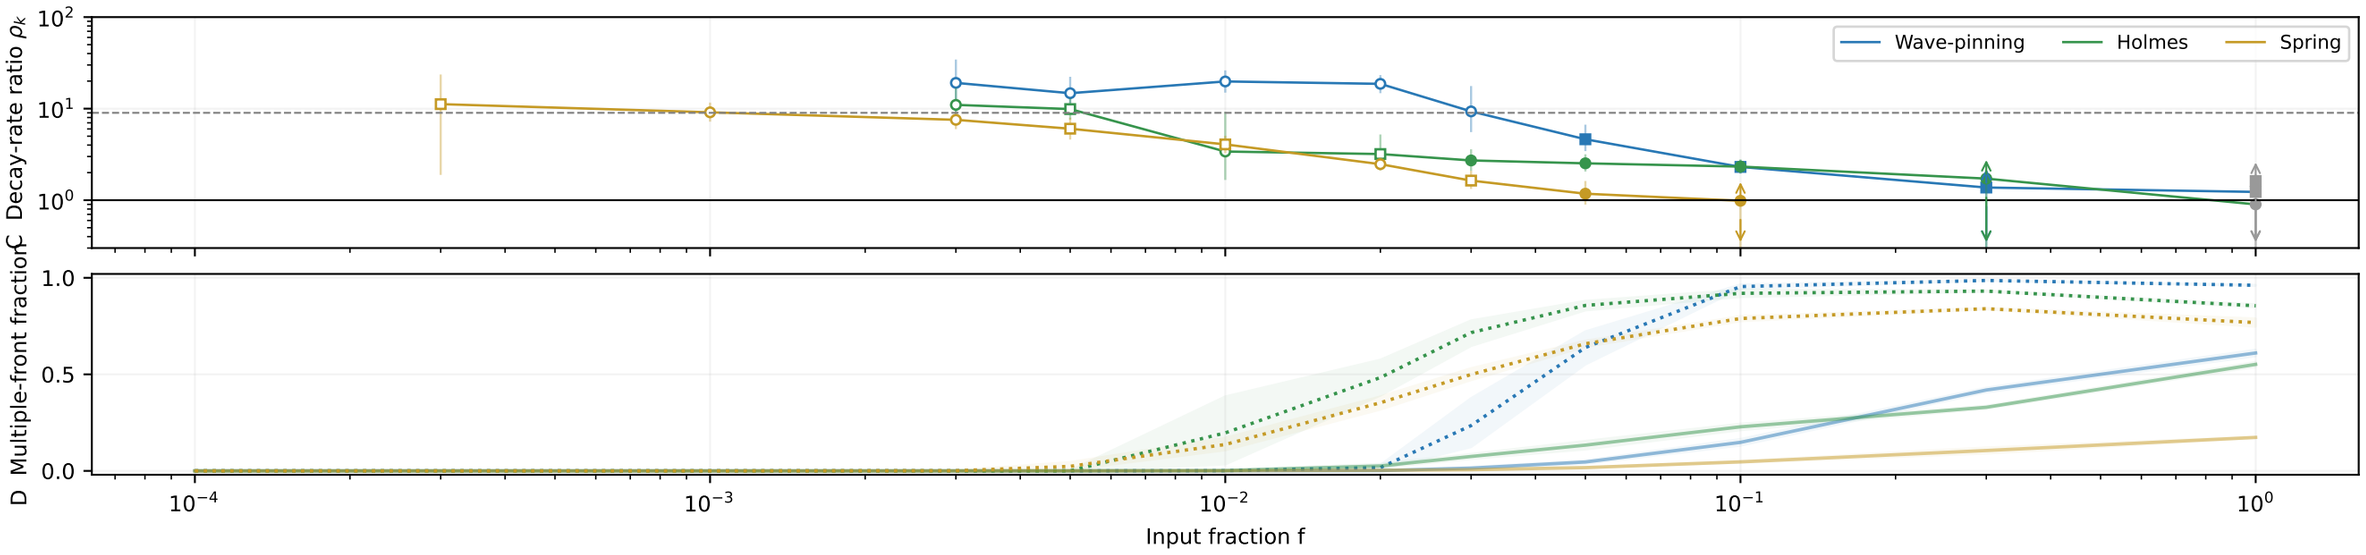

A Native activity histories

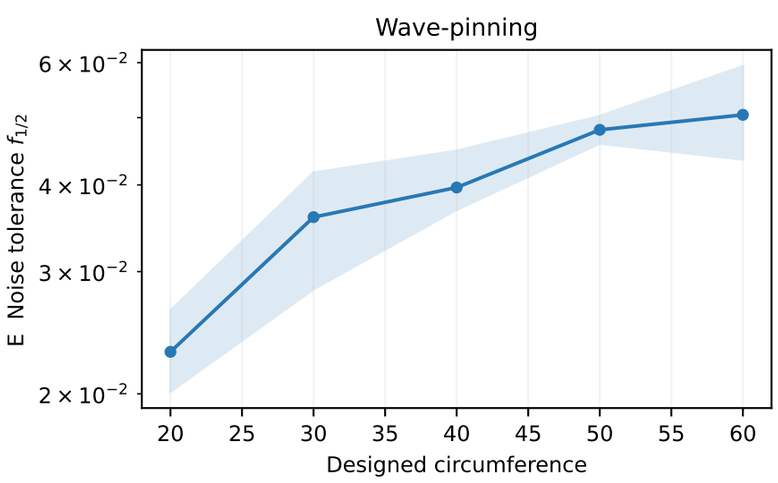

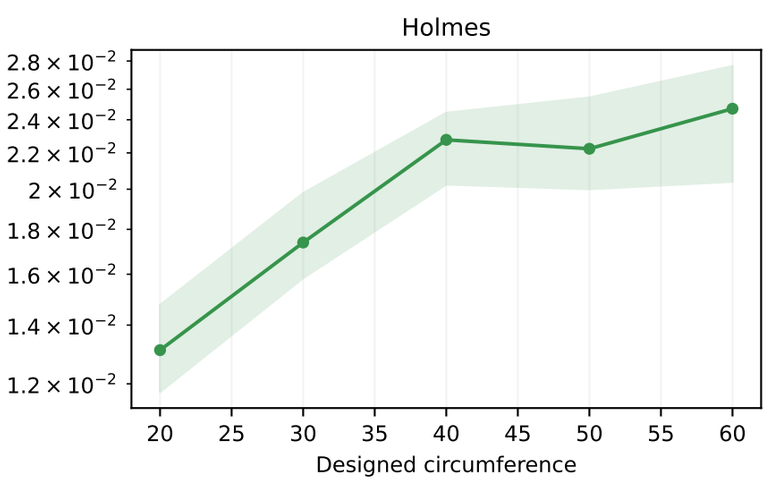

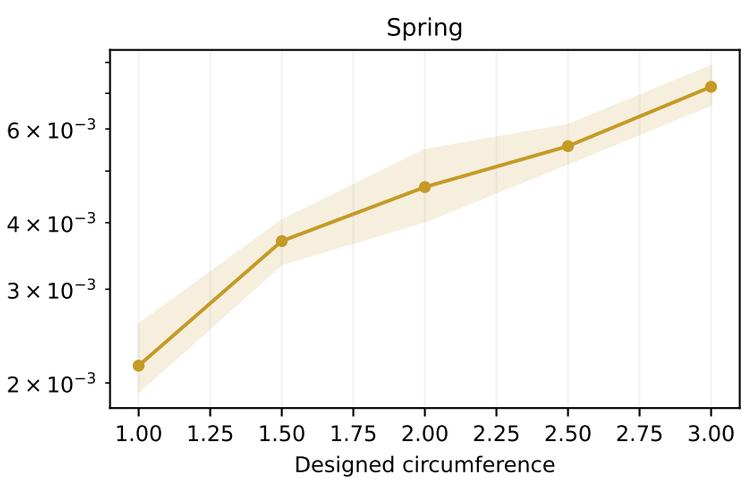

Small: lighter solid; large: darker dotted. C: open fill single front; filled multiple fronts; grey fill low contrast; square >1.5× lag drift.
Pointwise whole-seed 95% CIs. Horizontal references: ratio 1 and nominal geometry 9. D is descriptive; it does not establish a cause of erosion.
H1 uses a post hoc f < large-cell f½ domain; frozen H1 remains inconclusive. Goryachev retained in supplement only.
